Forecast For Northwest England
Issued by Met Office Exeter
at 0400 on Friday 14 May 2021

++ Valid for broadcast between 0600 and 1800

Headline:
Less frequent showers than recently, but quite cloudy.

Today:
A largely dry and cloudy day across the region, with westernmost areas seeing the best of any sunny spells. Some isolated showers remain possible throughout, but these lighter and less frequent than recently. Maximum temperature 15 deg C (59 deg F).

Tonight:
Cloud builds throughout the evening, with isolated evening showers giving way to a band of rain that moves across the region through the early hours, heavy in places. Minimum temperature 6 deg C (43 deg F).

Saturday:
A cloudy morning with rain persisting. Into the afternoon, rain will give way to widespread showers, occasionally heavy and possibly thundery, with cloud breaking and allowing for some sunny spells. Maximum temperature 13 deg C (55 deg F).

Outlook for Sunday to Tuesday:
Remaining unsettled throughout the period, with sunny spells and showers. Sunday and Monday seeing the heaviest of these, with a risk of thunder. Tuesday seeing lighter and less frequent showers.
